SHORT QUESTIONS

Q.1- What are the major types of bank accounts?
Ans. There are three Major types of bank accounts

(i) **Current Account:**
This type of account is with highest degree of liquidity. Due to this quality, it is very Popular.

(ii) **Saving Account:**
People keep this account to deposit their savings for long time. This kind of accounts are an important source of funds for the bank.

(iii) **Fixed Account:**
This is a long time fixed account and a bank gets funds for long term lending and investment purposes.

Q.2- Define "Profit on deposit".
Ans. When a bank uses our money in some business, the bank pays some return for using our amount this return is called profit on deposit.

Q.3- Explain the term "Mark up"
Ans. When some person borrows funds from a bank, he has to pay some extra amount for using the funds. This extra amount is called mark up.

Q.4- What is the difference between simple and compound interest?
Ans. Profit on principle amount is called simple interest. If profit or interest for one year is added to the principle
amount then this sum is considered principle for the next year and the interest on this kind of amount is called compound interest.

Q.5- **What are the formulas to find simple and compound interest?**

**Ans.** For simple profit, we use formula

\[ \text{Simple Profit} = \frac{\text{Principal} \times \text{Time} \times \text{Rate}}{100} \]

For Compound Profit, the formula is

\[ \text{Principal} + \text{Compound Profit} = \text{Principal} \left[ 1 + \frac{\text{Rate}}{100} \right]^\text{Time} \]

or

\[ \text{Final Amount} = \text{Principal} \left[ 1 + \frac{\text{Rate}}{100} \right]^\text{Time} \]

Q.6- **Rs.4000 were invested at 5% for 3 years. Find the compound as well as simple profit.**

**Solution:**

Principal = Rs. 4000, Time = 3 years

Rate = 5%

**Simple Profit**

\[ \text{Simple Profit} = \frac{\text{Principal} \times \text{Time} \times \text{Rate}}{100} \]

\[ \frac{4000 \times 5 \times 3}{100} = 600 \text{ Ans.} \]

Now

**Principal + Compound Profit**

\[ \text{Principal} + \text{Compound Profit} = \text{Principal} \times \left[ 1 + \frac{\text{Rate}}{100} \right]^\text{Time} \]

\[ \text{Final Amount} = 4000 \times \left[ 1 + \frac{5}{100} \right]^3 \]

\[ = 4000 \times \frac{105}{100} \times \frac{105}{100} \times \frac{105}{100} = \text{Rs.4630.50} \]

**Compound Profit**

\[ = \text{Rs.4630.50} - \text{Rs.4000} \]

\[ = \text{Rs.630.50 Ans.} \]
Q.7- Write the formulas to find the mark up on loan for annual, monthly or daily bases.

Ans.

Mark up (Per annum) = \( \frac{\text{Amount Borrowed} \times \text{Rate} \times \text{Years}}{100} \)

Mark up (Per month) = \( \frac{\text{Amount Borrowed} \times \text{Rate} \times \text{Months}}{12 \times 100} \)

Mark up (Per day) = \( \frac{\text{Amount Borrowed} \times \text{Rate} \times \text{Days}}{365 \times 100} \)

Q.8- What do you mean by insurance?

Ans. Insurance is an agreement between two parties where by a party agrees to pay an amount by installments to an insurance company and the company covess or indemnify the rises to the life or other thing for which the insurance is made.

Q.9- What do you mean by leasing?

Ans. Lease is a contract where by the owner of an asset gives the hires the right to use the asset for a specified period in exchange of rental payment.

Q.10- Define the term "Down Payment".

Ans. The payment deposited by the customer to the bank along with the application form is called "Down Payment".

SOLVED EXERCISES

EXERCISE 4.1

Q.1- Convert 250 US Dollars into sterling Pound.

Solution:-

Buying rate of 1 US Dollar = Rs.83.800
Price of 250 US Dollars = \( 250 \times 83.800 = Rs.20950 \)
Rate of 1 Pound = Rs.129.7968

Therefore:
250 US Dollars = \frac{20950}{129.2768} = 161.4060 \text{ Pounds}

Q.2- Convert 5000 Riyals into Pak rupee.
Solution:-
Price of 1 Riyal = Rs.22.3449 Pak Rupees
Price of 5000 Riyal = 5000 \times 22.3449 \text{ Pak Rupees}
= Rs.1,11,724.5

Q.3 An importer imports a car from Japan for 5000 Yen. Delivery was to be made after three months. At the time of contract Rs1 = 0.895236 Yen. At the time of delivery Rs 1 = 0.892236 Yen. Payment was made at the time of contract. Determine the profit or loss of the importer.
Solution:- At the time of contract
0.895236 \text{ Yen} = \text{ Re} 1

1 \text{ Yen} = \text{ Rs} \frac{1}{0.895236}

5000 \text{ Yen} = \text{ Rs} \frac{1}{0.895236} \times 5000

5000 \text{ Yen} = \text{ Rs} 5585.12

Similarly at the time of delivery
5000 \text{ Yen} = \text{ Rs} \frac{1}{0.892236} \times 5000 = \text{ Rs} 5603.90

Therefore, Profit = \text{ Rs} 5603.90 - \text{ Rs} 5585.12 = \text{ Rs} 18.78 \text{ AnS.}

Q.4- A customer wants to convert 150 American dollars into rupees. He goes to an authorised dealer. He offers him conversion at the rate of 1 dollar = Rs.84.100. If it is converted with a money changer, the rate is 1 dollars = Rs.83.4495, determine the amount into rupees if it is converted with:
(i) Authorised dealer \quad (ii) Money Changer
(iii) The loss due to conversion with the money changer.

Solution:

Amount = 150 US Dollers

(i) For authorised dealer.

1 Dollar = Rs 84.100

Thus 150 Dollers = Rs 150 \times 84.100 = Rs. 12615 \text{ Ans.}

(ii) For Money changer

1 Dollar = Rs 83.4495

150 Dollers = Rs 150 \times 83.4495 = Rs 12517.42

(iii) Loss due to conversion with the

Money changer = Rs 12615 - 12517.42

= Rs 97.58 \text{ Ans.}

Q.5- Rate of tea in Pakistan is Rs.21.0 per pound. Determine the rate per Kilogram, if

(i) 1kg = 2.2 Pound

(ii) What will be the rate in Saudi Arabia if Saudi

1 Riyal = Rs.22.400.

Solution:

1 kg = 2.2 pounds

Rate of tea for 1 pound = Rs 21.00

(i) Rate of tea for 1 kg = Rs 21.00 \times 2.2

= Rs 42.42

(ii) Now

Rs.22.400 = 1 Riyal

Re.1 = \frac{1}{22.400} \text{ Riyal}

Rs.42.42 = 42.42 \times \frac{1}{22.400}

= 1.89375 \text{ Riyal per kg. Ans.}
Q.6- An exporter of carpets exports to England Carpets amounting to 40000 Sterling Pound. The spot buying rate exchange at that time was Rs.129.4542 to 1 Sterling. He receives the amount at the time when rate is Rs.129.0599 to 1 Sterling. How much he looses?

Solution:-

Amount = 40,000 Sterling Pounds
At the time of exportation
1 Sterling Pound = Rs.129.4542
4000 Sterling Pound = 40000 x 129.4542
= 5178168 Pak Rupees

At the time of receiving amount
1 Sterling Pound = Rs.129.0599
4000 Sterling Pound = 40000 x 129.0599 = 5162396
Loss = 5178468 - 5162396 = Rs. 15772

Q.7- A Pakistani living in Saudi Arabia earns 4370 Riyals a month. His monthly expenses comes to 3450 Riyals. He remits his saving monthly to Pakistan. How much he saved in a year if rate of exchange is Rs.22.400 = 1 Saudi Riyals. After a year Rate of exchange is Rs.22.3004. Determine the loss due to monthly remittance.

Solution:-

Monthly earning = 4370 Riyals
Monthly expenses = 3450 Riyals
Monthly saving = 920 Riyals
Saving in a year = 920 x 12, = 11040 Riyals
Rate of exchange
1 Saudi Riyal = Rs.22.400
11040 Saudi Riyal = 11040 x 22.400
= 247296 Pak Rupees

After one year.
1 Saudi Riyal = Rs.22.3004
11040 Saudi Riyal = Rs.11040 × 22.3004
= 246196.42 Pak Rupees

His Profit = 247296 – 246196.42
= 1099.58 Pak Rupees Ans.

Q.8- Rizwan purchases a car in Saudi Arabia for 15000 Riyals. Delivery was to be made after three months and payment is also to be made at the time of delivery. At the time of contract, the rate was 1 Riyal = Rs.22.400, while at the time of delivery the rate was 1 Riyal=Rs.22.0827. Determine the loss in rupees due to change in the rate.

Solution:- At the time of Contract
Rate of 1 Riyal = Rs.22.400
15000 Riyal = Rs.22.400 × 15000
= 336000 Pak Rupees

At the time of delivery
1 Riyal = Rs.22.0827 Rupees
15000 Riyal = Rs.22.0827 × 15000 = 331240.5

Profit of Rizwan = 336000 – 331240.5
= 4759.5 Pak Rupees

Q.9- A friend of Ali living in Saudi Arabia remits Ali 450 Riyals. The bank offers two conversions rate. T.T. Buying Rs.22.3449 = 1 Riyal T/C Buying Rate: Rs.22.2146 = 1 Riyal Which one of the rate will be applicable and also calculate the amount in rupees.

Solution:-
T.T Buying Rs.22.3449 = 1 Riyal
and T/c Buying Rate Rs.22.2146 = 1 Riyal
As TT Buying rate is more than T/c Buying rate. So TT buying is applicable. Ali's friend will buy TT.
He will get Pak rupees = \(22.3449 \times 450\)
\[= 10055.20 \text{ Ans.}\]

**EXERCISE 4.2**

**Q.1-** A financial institution charges Rs.55 simple profit on a sum of money which is borrowed for five months. Given that the rate of profit is 12% per annum, find the sum of money.

Solution:- We are given that
Simple Profit = Rs55

Time = 5 months = \(\frac{5}{12}\) Years

Rate = 12% Per annum

Principal = ?

Principal = \(\frac{100 \times \text{Simple Profit}}{\text{Rate} \times \text{Time}}\)
\[= \frac{100 \times 55}{12 \times \frac{5}{12}}\]
\[= \frac{100 \times 55}{5} = 1100 \text{ Rupees Ans.}\]

**Q.2-** Mrs.Jayed invests in Savings Scheme Rs.800 at 6% per annum and Rs.1,200 at 7% per annum. What is her total amount of profit on these two investments?

Solution:- For first investment

Simple Profit = \(\frac{\text{Principal} \times \text{Time} \times \text{Rate}}{100}\)
\[= \frac{800 \times 1 \times 6}{100} = \text{Rs48}\]

For the 2nd investment...
Simple Profit = \( \frac{1200 \times 7 \times 1}{100} = Rs84 \)

Total Profit = 48 + 84 = Rs132 Ans.

Q.3- How long would Rs.1.250 have to be deposited at 6% per year simple profit to gain Rs.750 simple profit?

Solution:

Simple Profit = \( \frac{\text{Principal} \times \text{Time} \times \text{Rate}}{100} \)

Time = \( \frac{\text{S.P} \times 100}{\text{Principal} \times \text{Rate}} \)

= \( \frac{750 \times 100}{125 \times 6} = 10 \) years. Ans.

Q.4- Ali lent to Abid Rs.4,800 for 7 months. At the end of this period, Abid had to pay Ali profit of Rs.119. What was the rate of simple profit per annum?

Solution:

Rate = \( \frac{\text{Simple Profit} \times 100}{\text{Principal} \times \text{Time}} = \frac{119 \times 100}{4800 \times \frac{7}{12}} \)

= \( \frac{119 \times 100}{400 \times \frac{7}{4}} = \frac{119 \times 4}{400 \times 7} = 4.25\% \) Per year

Q.5- In a certain year, Javed puts Rs.600 in a private bank at the end of March and Rs.400 in the same bank at the end of June. The bank offers 3% per annum simple profit rate. Find the total amount Javed receives from the bank at the end of December in that year?

Solution: Javed invested Rs.600 for

9 months or \( \frac{9}{12} \) years.
\[ \text{\therefore Profit for Rs.600} \]
\[ 6 \times 9 \times 9 \]
\[ = \frac{1 \times 3 \times 9}{10} \]
\[ = 6 \times 9 = \frac{27}{2} = 13.5 \text{ = Rs} 13.5 \]

He invested Rs.400 for 6 months.

Or \( \frac{6}{12} = \frac{1}{2} \) year

\[ \therefore \text{Profit for Rs.400} = \frac{4 \times 9 \times 1 \times 1}{10} \]

\[ = \text{Rs} 6.\text{Ans.} \]

Total Profit = Rs.13.5 + Rs.6 = Rs.19.5

Thus

Javed will receive the total amount

\[ = \text{Rs.600 + Rs.400 + Rs.19.5} \]

\[ = \text{Rs.1019.5 Ans.} \]

Q.6- At what annual rate of profit would a sum of Rs.680 will increase to Rs.850 in 3 years and 4 months?

Solution:-

Principal = Rs680

Time = 3 years and 4 months = 3 \( \frac{4}{12} \) years = \( \frac{10}{3} \) years.

Rate = ?

Total Profit = Rs.850 - Rs.680 = Rs.170

Thus

\[ \text{Rate} = \frac{\text{Profit} \times 100}{\text{Principal} \times \text{Time}} = \frac{17 \times 100}{68 \times \frac{10}{3}} \]

\[ = \frac{3 \times 100}{4 \times 10} = 30 \times \frac{3}{4} = 7.50\% \text{ P.A Ans.} \]
Q.7- Copy and complete the following table with the help of formula given in this unit?

Solution:

<table>
<thead>
<tr>
<th>Principle</th>
<th>Profit rate</th>
<th>Time</th>
<th>Simple Profit</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>(a) Rs. 12,000</td>

</tbody>
</table>

Q.8- A bank increased the rate of profit from 3.5% to 4% per annum. Find how much more profit Saeed would receive if he deposited Rs. 6400 in the bank for 6 months at the new profit rate.

Solution: At the old profit rate

$$\text{Profit} = \frac{6400 \times \frac{1}{2} \times 3.5}{100}$$

$$= 32 \times \frac{7}{2} = \text{Rs. 112}$$

At new Profit rate

$$\text{Profit} = \frac{6400 \times \frac{1}{2} \times 4.0}{100}$$

$$= 32 \times 4 = \text{Rs. 128}$$

The amount of more Profit = Rs. 128 - Rs. 112 = Rs. 16 Ans.
Q.9- Mrs. Jamshed invested Rs.4000 in XYZ Bank Limited which paid simple profit at a rate $7\frac{1}{4}\%$ per annum to its investors. After 2 years, the rate was increased to 8% per annum. Find the amount she had at the end of 7 years.

Solution:-

$$\text{Profit of first two years} = \frac{4000 \times 7\frac{1}{4} \times 2}{100}$$

$$= 40 \times \frac{29}{4} \times 2 = \text{Rs.}580$$

$$\text{Profit of last 5 years} = \frac{4000 \times 8 \times 5}{100} = \text{Rs.}1600$$

Total Profit = Rs.1600 + Rs.580 = Rs.2180 Ans.

Total Amount she had = $4000 + 2180 = \text{Rs.}6180$ Ans.

Q.10- Mr. Dawood deposits a certain sum of money in ABC Limited. If the profit rate of the bank decreases from $3\frac{3}{4}\%$ per annum to $3\frac{1}{2}\%$ per annum, Mr. Dawood's profit will decrease by Rs.50 in a years. Find the sum of money he deposits.

Solution:-

Difference of two rates = $3\frac{3}{4} - 3\frac{1}{2} = \frac{1}{4}\%$

Therefore Profit is decreased by Rs.50 at the rate of $\frac{1}{4}\%$ during one year. Thus

$$\text{Principal} = \frac{\text{Profit} \times 100}{\text{Time} \times \text{Rate}}$$
\[
\frac{50\times 100}{1 \times 4} = 5000 \times 4 = 20,000
\]
Principal = Rs.20000 Ans.

**Q.11- Find the compound profit on.**

(i) Rs.450 for 2 years at 10% per annum compounded yearly;

(ii) Rs.700 for 3 years at 11% per annum compounded yearly;

(iii) Rs.5000 for 2 years at \(11\frac{3}{4}\) per annum compounded yearly;

(iv) Rs.1200 for 3 years at 4% per annum compounded yearly;

(v) Rs.10000 for 3 years at \(7\frac{1}{2}\) per annum compounded yearly;

Solution:-

(i) Final Amount = \(P \times \left[1 + \frac{\text{Rate}}{100}\right]^\text{Time}\)

Final Amount = \(450 \times \left[1 + \frac{10}{100}\right]^2\)

\[= 450 \times (1.1)^2\]
\[= 450 \times (1.21) = 544.5\]

Compound Profit = Final Amount − Principal

\[= 544.5 - 450 = \text{Rs.94.50 Ans.}\]

(ii) Final Amount = \(\text{Principal} \times \left[1 + \frac{\text{Rate}}{100}\right]^\text{Time}\)

\[= 700 \times \left[1 + \frac{11}{100}\right]^3\]
\[
= 700 \times (1.11)^3 \\
= 700 \times (1.3676) = 957.34
\]

**Compound Profit = Final Amount - Principal**

\[
= \text{Rs.}957.34 - \text{Rs.}700
= \text{Rs.}257.34 \text{ Ans.}
\]

(iii) 

**Final Amount = Principal \times \left[ 1 + \frac{\text{Rate}}{100} \right]^\text{Time}**

\[
= 5000 \times \left[ 1 + \frac{11.75}{100} \right]^2 \\
= 5000 \times (1.1175)^2 \\
= 5000 \times (1.2488) = 6244.03
\]

**Compound Profit = Rs.6244.03 - Rs.5000**

\[
= \text{Rs.}1244.03 \text{ Ans.}
\]

(iv) 

**Final Amount = Principal \times \left[ 1 + \frac{\text{Rate}}{100} \right]^\text{Time}**

\[
= 1200 \times \left[ 1 + \frac{4}{100} \right]^3 \\
= 1200 \times (1.04)^3 = 1200 \times (1.1249) \\
= \text{Rs.}1349.88
\]

**Compound Profit = 1349.88 - 1200 = 149.88**

(v) 

**Final Amount = Principal \times \left[ 1 + \frac{\text{Rate}}{100} \right]^\text{Time}**

\[
= 10000 \times \left[ 1 + \frac{7.50}{100} \right]^3 \\
= 10000 \times (1.075)^3 = 10000(1.2423) \\
= \text{Rs.}12422.97
\]

**Compound Profit = Final Amount - Principal**

\[
= \text{Rs.}12422.97 - \text{Rs.}10000 \\
= \text{Rs.}2422.97 \text{ Ans.}
\]
Q.12- Waseem invests Rs.5000 at $\frac{1}{4} \%$ per annum profit compounded annually. Find the amount at the end of the third year.

Solution:-

At the end of the third year,

\[ \text{Total Amount} = \text{Principal} \times \left[ 1 + \frac{\text{Rate}}{100} \right]^\text{Time} \]

\[ = 5000 \times \left[ 1 + \frac{5.25}{100} \right]^3 \]

\[ = 5000 \times (1.0525)^3 \]

\[ = 5000 \times 1.1659 \]

\[ = \text{Rs.5829.57 \text{ Ans.}} \]

Q.13- Javed invests Rs.800 at $12\frac{1}{2}$% per annum compound profit compounded half-yearly. What is the amount at the end of the first year?

Solution:-

Principal = Rs.800, \quad \text{Rate} = 12\frac{1}{2}\% = 12.50\% \text{ PA}

Time = One year

= 2 terms of half years.

Because Profit is Compounded half yearly

So \quad \text{Rate} = 6.25 \text{ half yearly.}

Final Amount = \text{Principal} \times \left[ 1 + \frac{\text{Rate}}{100} \right]^\text{Time}

\[ = 800 \times \left[ 1 + \frac{6.25}{100} \right]^2 \]

\[ = 800 \times (1.0625)^2 \]

\[ = \text{Rs.903.13 \text{ Ans.}} \]
Q.14- Mr. Saleem invests Rs. 9000 at 2% per annum compound profit compounded daily. What is his amount at the end of the third day.

Solution:
Principal = Rs. 9000
Rate = 2% per annum.
Time = 3 Days.
As the Profit is compounded daily
So Rate = \( \frac{2}{365} \)% Daily.

\[ \text{Final Amount} = 9000 \times \left[ 1 + \frac{2}{ \frac{365}{100}} \right]^3 \]

\[ = 9000 \times \left[ 1 + \frac{2}{36500} \right]^3 \]

\[ = 9000 \times (1.0000548)^3 \]

\[ = \text{Rs. 9001.48 Ans.} \]

Exercise 4.3

Q.1- A man borrowed Rs. 1460 from ABC Bank on the 3rd of March at \( 12\frac{1}{2} \)% What should he pay on the 1st of July to pay off the debt.

Solution:
Principal = Rs. 1460.

Rate = \( 12\frac{1}{2} \)% = 12.50% P.A.

Time = 3rd of March to 1st of July.

\[ = \frac{121}{365} \text{ days} = \frac{121}{365} \text{ years.} \]
Mark up = \( \frac{\text{Principal} \times \text{Time} \times \text{Rate}}{100} \)

\( = \frac{1460 \times 121 \times 12.50}{365 \times 100} = \text{Rs.60.5} \)

Thus Total amount = Principal + Mark up

\( = \text{Rs.1460} + \text{Rs.60.5} = \text{Rs.1520.5} \text{ Ans.} \)

Q.2- A shopkeeper borrowed Rs.3540 from ABC Bank at \( 10\frac{3}{4} \% \) and lent the whole amount at \( 11\frac{1}{2} \% \) on the same day, what would he gain from this after 3 years and 4 months.

Solution:- Principal = Rs.3540

Rate = \( 10\frac{3}{4} \% \) P.A. = 10.75 P.A.

Time = 3 year and 4 months.

\( = 3 + \frac{4}{12} \text{ years} = \frac{10}{3} \text{ years.} \)

Bank's Mark up = \( \frac{\text{Principal} \times \text{Rate} \times \text{Time}}{100} \)

\( = \frac{3540 \times 10.75 \times \frac{10}{3}}{100} \)

\( = \frac{354 \times 10.75 \times \frac{10}{3}}{100} = \text{Rs.1268.50} \)

Profit gained by him = \( \frac{3540 \times 11.50 \times 10}{100 \times 3} = \text{Rs.1357} \)

He will given = Rs.1357 – Rs.1268.50 = Rs.88.50 Ans.

Q.3- XYZ Bank gained Rs.8034 on its loan at 6% compound markup in 2 years. What amount did it lend?

Solution:-

Let us suppose the Principal amount is Rs.100. Then
Final Amount = $100 \times \left[ 1 + \frac{6}{100} \right]^2$

$= 100 \times (1.06)^2$

$= 100 \times (1.1236)$

$= \text{Rs.12.36}$

Compound Profit = Final Amount – Principal

$= \text{Rs.112.36} - \text{Rs.100}$

$= \text{Rs.12.36}$

So For the Profit of Rs.12.36, loan = Rs.100

For the Profit of Rs.1, loan = Rs.\(\frac{100}{12.36}\)

For the Profit of Rs.8034, loan = Rs.\(\frac{100}{12.36} \times 8034\)

$= \text{Rs.65000 Ans.}$

Q.4- A Company borrowed Rs.6,600 from ABC Bank Ltd at 8% simple markup per annum. How much did the company owe to the bank at the end of 11 months?

Solution:-

Principal Amount = Rs.6,600

Rate = Simple Markup 8% P.A.

Time = 11 months = \(\frac{11}{12}\) years.

Simple Markup = \(\frac{\text{Principal} \times \text{Rate} \times \text{Time}}{100}\)

$= \frac{6600 \times 8 \times 11}{100 \times 12} = \text{Rs.484}$

Total amount = Principal + Mark up

$= \text{Rs.6600} + \text{Rs.484}$

$= \text{Rs.7084 Ans.}$
Q.5- XYZ Bank charges 2.25% per month simple markup on personal loans. If Ali borrows Rs.6,400 for a period of 2 years 1 month, find the total markup he has to pay to XYZ Bank.

Solution:-
Principal amount = Rs.6,400
Rate of Simple Markup = 2.25% Per Month.
Time = 2 years 1 month = 25 Months.
Simple Markup = \[
\frac{\text{Principal} \times \text{Rate} \times \text{Time}}{100}
\]
\[
= \frac{6400 \times 2.25 \times 25}{100}
\]
\[
= 64 \times 2.25 \times 25 = \text{Rs.3600 Ans.}
\]

Q.6- Find out the compound markup on Rs.250,000 for one year @ 14% compounded annually.

Solution:-
Principal = Rs.250,000, Time = 1 year
Compounded Markup rate = 14% P.A.
Total Amount = Principal \( \left[ 1 + \frac{\text{Rate}}{100} \right]^\text{Time} \)
\[
= 250,000 \left[ 1 + \frac{14}{100} \right]^{1}
\]
\[
= 250,000(1.14) = \text{Rs.285,000}
\]
Markup = Total amount - Principal
\[
= \text{Rs.285,000} - 250,000
\]
\[
= \text{Rs.35000 Ans.}
\]

Q.7- Find compound profit on Rs.600, for 4 years at 6 percent per annum.

Solution:-
Principal = Rs.600, Time = 4 years.
Compounded Profit rate = 6% P.A.
Total Amount = Principal \times \left[ 1 + \frac{\text{Rate}}{100} \right]^\text{Time}

= 600 \times \left[ 1 + \frac{6}{100} \right]^4

= 600(1.06)^4 = 600(1.262477)

= Rs.757.49

\text{Compound Profit} = \text{Rs.757.49} - 600 = \text{Rs.157.49 Ans.}

Q.8- Find the compound profit of Rs.50000 at 4\% for 1\frac{1}{2} \text{ years.}

\text{Solution:-}

\text{Principal} = \text{Rs.50,000}

\text{Rate} = 4\% \text{ P.A.}

\text{Time} = 1\frac{1}{2} \text{ years:}

\text{Total Amount} = \text{Principal} \times \left[ 1 + \frac{\text{Rate}}{100} \right]^\text{Time}

= 50,000 \times \left[ 1 + \frac{4}{100} \right]^\frac{3}{2}

= 50,000 \times \left[ 1 + \frac{4}{100} \right]^{\frac{3}{2}} \times \left[ 1 + \frac{2}{100} \right]

= 50,000(1.04)(1.02) = \text{Rs.53040}

\text{Compound Profit} = \text{Rs.53040} - \text{Rs.50000}

= \text{Rs.3040 Ans.}

Q.9- Find the compound profit on Rs.54000 for one year at 12\% per annum.

\text{Solution:-}

\text{Total Amount} = \text{Principal} \times \left[ 1 + \frac{\text{Rate}}{100} \right]^\text{Time}
\[ = 54,000 \times \left[ 1 + \frac{12}{100} \right]^l \]
\[ = 54,000 \times (1.12) = \text{Rs.60480} \]

Compound Profit = Rs.60480 - Rs.54000
\[ = \text{Rs.6480 Ans.} \]

**EXERCISE 4.4**

Q.1- **If the amount of premium is calculated as.**
Yearly premium = @ 4.5% of the policy income
+ policy fee @ 0.25% of the policy amount or at the most Rs.200.
Half yearly premium @ 52% of yearly premium.
Quarterly premium @ 27% of yearly premium.
Monthly premium @ 9% of yearly premium.
Then complete the table below for calculation of the premiums.
Also find the total amount he pays to the company.

<table>
<thead>
<tr>
<th>Amount of policy</th>
<th>Yearly premium</th>
<th>Half yearly premium</th>
<th>Quarterly premium</th>
<th>Monthly premium</th>
</tr>
</thead>
<tbody>
<tr>
<td>(i) 50,000</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>(ii) 100,000</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>(iii) 150,000</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>(iv) 200,000</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Solution:-

(i) Amount of Policy = Rs.50,000

Yearly premium @4.5% = Rs. \(\frac{4.5}{100} \times 50000\) = Rs.2250

Policy Fee @ 0.25% = 50000 \(\times \frac{0.25}{100}\) = Rs.125

Total amount of yearly Premium = Rs.2250 + Rs.125
\[ = \text{Rs.2375 Ans.} \]
Half yearly Premium = 52% of yearly Premium

\[ \frac{52}{100} \times 2375 = Rs.1235 \text{ Ans.} \]

Quaterly Premium = Rs \( \frac{27}{100} \times 2375 = Rs.641.50 \text{ Ans.} \)

Monthly Premium = \( \frac{9}{100} \times 2375 = Rs.213.75 \text{ Ans.} \)

(ii) Amount of Policy = Rs.100,000

Yearly premium @4.5% = Rs. \( \frac{4.5}{100} \times 100000 \)

\[ = Rs.4500 \text{ Ans.} \]

Policy Fee @ 0.25% = \( \frac{0.25}{100} \times 100000 = 250 > 200 \)

Thus Policy fee = 200

Total amount of yearly Premium = 4500 + 200

\[ = Rs.4700.00 \text{ Ans.} \]

Half yearly Premium = \( \frac{52}{100} \times 4700 = Rs.2444.00 \text{ Ans.} \)

Quaterly Premium = Rs \( \frac{27}{100} \times 4700 = Rs.1269.00 \text{ Ans.} \)

Monthly Premium = \( \frac{9}{100} \times 4700 = Rs.423.00 \text{ Ans.} \)

(iii) Amount of Policy = Rs.150,000

yearly Premium = \( \frac{4.5}{100} \times 150000 = 6750.00 \)

Policy fee = Rs.200.00

Total amount of yearly Premium = 6750 + 200

\[ = Rs.6950.00 \text{ Ans.} \]

Half yearly Premium = \( \frac{52}{100} \times 6950 = Rs.3614 \text{ Ans.} \)
Quarterly Premium = Rs. \( \frac{27}{100} \times 6950 = Rs.1876.50 \) Ans.

Monthly Premium = \( \frac{9}{100} \times 6950 = Rs.625.30 \) Ans.

(iv)

Amount of Policy = Rs.200000.00

Yearly Premium = \( \frac{4.5}{100} \times 200000 = 9000 = 200 \)

Total yearly Premium = 9000 + 200 = Rs.9200.00 Ans.

Half yearly Premium = \( \frac{52}{100} \times 9200 = Rs.4784.00 \) Ans.

Quarterly Premium = Rs. \( \frac{27}{100} \times 9200 = Rs.2484.00 \) Ans.

Monthly Premium = \( \frac{9}{100} \times 9200 = Rs.828.00 \) Ans.

Q.2- Calculate the amount to be received by the heirs of an insured if he died 2 years after buying the policy while.

The amount of policy = Rs.50,000
Premium is fixed @ 4.2% yearly
Policy fee @ 0.3%
Family income contract @ 0.6%
Maturity period = 22 years
Bonus @ 4.5% and Rs.6000 yearly income is promised by the company.

Solution:-

Policy Amount = Rs.50,000.00

Bonus for two years @4.5% = \( \frac{50000 \times 4.5 \times 2}{100} \)

= 4500

The family will get 6,000 yearly as income for next 20 years.
Total family income. = \( 6000 \times 20 = Rs.120,000 \)
Total Amount = \( 50,000.00 + 4500 + 120,000 \)
= Rs174500 Answ.

Q.3- Mr. Ahmed Ali insures his house worth Rs.75,00,000 @ 2\% for 4 years calculates the amount paid in 4 years, while the rate of depreciation is 10\% yearly.

Solution:-

Amount of Policy = Rs.75,00,000

1st Premium @2\% = \( \frac{2}{100} \times 75,00,000 = 1,50,000 \)

Depreciation @10\% = \( \frac{10}{100} \times 75,00,000 = 7,50,000 \)

Value of house after one year.
= \( 75,00,000 - 7,50,000 \)
= Rs.67,50,000

2nd Premium @2\% = \( \frac{2}{100} \times 67,50,000 = Rs.1,35,000 \)

After two years

Depreciation @10\% = \( \frac{10}{100} \times 67,50,000 = Rs.6,75,000 \)

Depreciation value = Rs.(67,50,000 - 6,750,00)
= Rs.60,75,000

3rd Premium @2\% = \( \frac{2}{100} \times 60,75,000 \)
= Rs.1,21,500

After 3 year

4th Premium = 0

Total amount paid in 4 years
= Rs.(150,000 + 135,000 + 121,500 + 0)
= Rs.406500 Answ.
Q.4- Mr. Nadeem insured his shop @3% for 3 years, the depreciation rate is 5% yearly. If he paid an amount of Rs.21000 as the 1st premium, what is the worth of his shop. If he got a claim of Rs.200,000 after two years, how much benefits did he get?

Solution:-

3% of worth of shop = 1st Premium

\[
\frac{3}{100} \text{ of worth of shop} = Rs.2100
\]

\[
\text{Worth of shop} = \frac{100}{3} \times 21000 = Rs.700,000
\]

After one year

Depreciation @5% = \[
\frac{5}{100} \times 700000 = Rs.35,000
\]

Depreciated value = Rs.(700,000 - 35000)

= Rs.665000

2nd Premium @3% = \[
\frac{3}{100} \times 665,000 = Rs.19950
\]

Total amount paid in 2 years = Rs.(21000)+(19950)

= Rs.40950

Amount of claim = Rs.200,000

Benefits = Rs.(200,000 - 40950) = Rs.159050 Ans.

Q.5- Mr. Adil bought a running business worth Rs.10,00,000 and got it insured @2.5% as yearly premium for 4 years. After 3 years he got a claim of Rs.500,000 for actual damages. How much loss had he recovered through insurance?

Solution:-

Amount of Policy = Rs.10,00,000

1st Premium @2.5% = \[
\frac{2.5}{100} \times 10,00,000
\]
Depreciation @10% = \frac{10}{100} \times 10,00,000 = \text{Rs.}1,00,000

Depreciated value = \text{Rs.}(10,00,000 - 1,00,000) = \text{Rs.}9,00,000

2nd Premium @2.5\% = \frac{2.5}{100} \times 9,00,000 = \text{Rs.}22,500

After 2 years.

Depreciation @10\% = \frac{10}{100} \times 9,00,000 = \text{Rs.}90,000

Depreciated value = \text{Rs.}(9,00,000 - 90,000) = \text{Rs.}8,10,000

3rd Premium @2.5\% = \frac{2.5}{100} \times 8,10,000 = \text{Rs.}20,250

After 3 years.

Total amount paid as Premiums =
= \text{Rs.}(25,000 + 22500 + 20250) = \text{Rs.}67750

Claim Received = \text{Rs.}5,00,000

Mr. Adil recovered = \text{Rs.}(5,00,000 - 67,750) = \text{Rs.}4,32,250 \text{ Ans.}

Q.6- Mr. Javeed bought an insurance policy against his car worth Rs.8,50,000, @ 4.25\% for 3 years. What total amount will he pay as premium, if he had not claimed and damages during the period? Where depreciation is 10\%.

Solution:-

Amount of Policy = \text{Rs.}8,50,000

1st Premium @4.5\% = \frac{4.5}{100} \times 8,50,000 = \text{Rs.}36,125

After one year,
Depreciation @10% = \frac{10}{100} \times 8,50,000 = Rs.85,000
Depreciated value = Rs.(8,50,000 - 85,000)
= Rs.7,65,000
2nd Premium @4.25% = \frac{4.25}{100} \times 7,65,000
= Rs.32512.50
3rd Premium = 0
Total payment = Rs.(36,125 + 32,512.50)
= Rs.68637.50

Q.7- Mr. Rehman bought a vehicle worth Rs.7,50,000. He got it insured @3.5% for 5 years. How much he paid in total for covering the risks, if he had got a claim of damages worth Rs.100,000 during the period? Where depreciation is 10%.

Solution:-
Value of vehicle = Rs.7,50,000
1st Premium @3.5% = 7,50,000 \times \frac{3.5}{100} = Rs.26250
After one year,
Depreciation @10% = \frac{10}{100} \times 7,50,000 = Rs.75,000
New value = Rs.(7,50,000 - 75,000) = Rs.6,75,000
2nd Premium @3.5% = \frac{3.5}{100} \times 6,75,000 = Rs.23625
After 2 years.
Depreciation @10% = \frac{10}{100} \times 6,75,000 = Rs.6,75,00
New value = Rs.(6,75,000 - 67,500) = Rs.60,75,00
3rd Premium @3.5% = \frac{3.5}{100} \times 60,75,00 = Rs.21262.50
After 3 years.

Depreciation @10% = \( \frac{10}{100} \times 60,75,00 = Rs.60750 \)

New value = Rs.(6,07,500 - 60750) = Rs.546750

4th Premium @3.5% = \( \frac{3.5}{100} \times 546750 = Rs.19136.25 \)

5th Premium = 0

Total payment = Rs.(26,250 + 23,625 + 21262.50 + 19136.25) = Rs.90273.75

Claim Recieved = Rs.1,00,000

Benefit = Rs.(1,00,000 - 90273.75) = Rs.9726.25 Ans.

Q.8- Ms. Maria bought an insurance policy @3.25% for her car for 3 years. Her 1st premium is Rs.26000. Tell the price of her car. Also calculate the amounts of her 2nd and 3rd premium.

Solution:-

1st Premium = Rs.26000

\[ 3.25\% \text{ of Price of car} = Rs.26000 \]

Price of car = \( \frac{26000 \times \frac{100}{3.25}}{325} = Rs.8,00,000 \) Ans.

After one year,

Depreciation @10% = \( \frac{10}{100} \times 8,00,000 \)

= Rs.80,000

New value = Rs.(8,00,000 - 80,000) = Rs.7,20,000

2nd Premium @3.25% = \( \frac{3.25}{100} \times 7,20,000 \)

= Rs.23400 Ans.

3rd Premium = 0 Ans.
Q.1- For each of the following.

(i) find the additional amount you have to pay by financing and

(ii) express the additional amount obtained in as a percentage of the cash price:

<table>
<thead>
<tr>
<th>Financing Term</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cash(Rs.)</td>
</tr>
<tr>
<td>-----------</td>
</tr>
<tr>
<td>(a) Rs.360</td>
</tr>
<tr>
<td>(b) Rs.900</td>
</tr>
<tr>
<td>(c) Rs.25000</td>
</tr>
</tbody>
</table>

Solution:-

(a) Cash Price = Rs.360
Down Payment = Rs.50
Payment by instalments = Rs.40 × 10
= Rs.400
Total Payment = Rs.400 + Rs.50 = Rs.450
Additional Amount = Payment - Cash Price.
= (450 - 360) = Rs.90 Ans.
Percentage of Cash Price = \( \frac{90}{360} \times 100 = 25\% \) Ans.

(b) Cash Price = Rs.900
Down Payment = Rs.150
Payment by instalments = Rs.75 × 12 = Rs.900
Total Payment = Rs.900 + Rs.150 = Rs.1050
Additional Payment = Rs.(1050 - 900) = Rs.150 Ans.
Percentage of Cash Price = \( \frac{150}{900} \times 100 = 16 \frac{2}{3}\% \) Ans.
(c) Cash Price = Rs. 25,000
Down Payment = Rs. 10,000
Payment in instalments = Rs. \((500 \times 36)\)
\[= \text{Rs.}18,000\]
Total Payment = Rs. \((10000 + 18,000)\) = Rs. 28,000
Additional Payment = Total Payment - Cash Price.
\[= \text{Rs.}(28000 - 25,000) = \text{Rs.}3000\text{ Ans.}\]
Percentage of Cash Price = \(\frac{3000}{25000} \times 100 = 12\%\text{ Ans.}\)

Q.2- Pervaiz buys a window air-conditioner at Rs. 900. He pays 20% deposit and the outstanding balance plus markup in 48 months. Markup on the balance is charged at 10%. Find
(i) the cost of his monthly instalment;
(ii) the amount he saves by paying cash.

Solution:-
Cash Price = Rs. 900
Cash Payment = 20% of Rs. 900
\[= \frac{20}{100} \times 900 = \text{Rs.}180\]
Remaining amount = Rs. 720, Time = 4 years.
Mark up = \(\frac{720 \times 10 \times 4}{100} = 288\)
Total amount to be paid = Rs. \((720 + 288)\) = Rs. 1008
Payment in each instalment
\[= \frac{1008}{48} = \text{Rs.}21\text{ Ans.}\]
Total Payment = Rs. \((180 + 1008)\) = Rs. 1188
By Paying Cash Price, he can save.
\[= \text{Rs.}(1188 - 900)\]
\[= \text{Rs.}288\text{ Ans.}\]
Q.3- On each of the following

(i) find the financial price of the goods and
(ii) express the amount saved by paying cash as a percentage of the cash price

<table>
<thead>
<tr>
<th>Item</th>
<th>Cash Rs.</th>
<th>Deposit</th>
<th>Number of Instalments</th>
<th>Monthly Instalments Rs</th>
</tr>
</thead>
<tbody>
<tr>
<td>(a) Computer</td>
<td>Rs.200</td>
<td>10%</td>
<td>24</td>
<td>Rs.9</td>
</tr>
<tr>
<td>(b) Printer</td>
<td>Rs.450</td>
<td>15%</td>
<td>18</td>
<td>Rs.25</td>
</tr>
<tr>
<td>(c) Scanner</td>
<td>Rs.1600</td>
<td>25%</td>
<td>30</td>
<td>Rs.52</td>
</tr>
</tbody>
</table>

Solution:-

(a) Cash Price of Computer = Rs.200

Deposit 10% = $\frac{10}{100} \times 200 = Rs.20$

Payment by instalments = $24 \times 9 = Rs.216$

Total Payment = Rs.(20 + 216) = Rs.236

Payment More than Cash Price = Rs.(236 - 200) = Rs.36

Percentage = $\frac{36}{200} \times 100 = 18\%$ Ans.

(b) Cash Price of Printer = Rs.450

Cash deposit @15% = $\frac{15}{100} \times 450 = Rs.67.50$

Payment in instalments = Rs.(25 \times 18) = Rs.450

Total Payment = Rs.(450 + 67.50) = Rs.517.50

Amount paid more than cash price = (517.50 - 450)

= Rs.67.50

\%age = $\frac{67.50}{450} \times 100 = 15\%$ Ans.

(c) Cash Price of Scanner = Rs.1600

Cash deposit @25% = $\frac{25}{100} \times 1600 = Rs.400$
Payment in instalments = Rs. $(52 \times 30) = Rs. 1560$

Total Payment = Rs. $(400 + 1560) = Rs. 1960$

Extra Payment = Rs. $(1960 - 1600) = Rs. 360$

\[
\text{%age} = \frac{360}{1600} \times 100 = 22.5\% \text{ Ans.}
\]

Q.4- For each of the following, find

(i) the monthly instalment and

(ii) the difference in the hire purchase price and the cash price as a percentage of the cash price:

<table>
<thead>
<tr>
<th></th>
<th>Cash Rs.</th>
<th>Hire-purchase terms</th>
</tr>
</thead>
<tbody>
<tr>
<td>(a)</td>
<td>Rs. 800</td>
<td>Rs. 100 deposit; balance 8%; 1 year</td>
</tr>
<tr>
<td>(b)</td>
<td>Rs. 8000</td>
<td>Rs. 200 deposit; balance 10% $2\frac{1}{2}$ year</td>
</tr>
<tr>
<td>(c)</td>
<td>Rs. 1200</td>
<td>Rs. 200 deposit; balance 15% $1\frac{1}{3}$ year</td>
</tr>
</tbody>
</table>

Solution:-

(a) Cash Price = Rs. 800

Cash Payment = Rs. 100

Balance = Rs. $(800 - 100) = Rs. 700$

Mark up rate = 8\% P.A

\[\text{Time} = 1 \text{ year.}\]

Mark up amount = \[
\frac{700 \times 8 \times 1}{100} = 56
\]

Total amount to be paid in 12 monthly instalments = Rs. 700 + Rs. 56 = Rs. 756

Payment of each instalments = Rs. \[
\frac{756}{12} = Rs. 63 \text{ Ans.}
\]

Difference of hire purchase price and cash price = Rs. 56 \text{ Ans.}

\[
\text{%age} = \frac{56}{800} \times 100 = 7\% \text{ Ans.}
\]
(b) Cash Price = Rs. 8000
Cash Payment = Rs. 200
Balance = Rs. (8000 - 200) = Rs. 7800
Mark up rate = 10%

\[
\text{Amount mark up} = \frac{7800 \times 10 \times 2.5}{100} = \text{Rs. 1950}
\]
Total amount to be paid = Rs. (7800 + Rs. 1950) = Rs. 9750
Number of instalments = 2.5 \times 12 \cdot = \text{Rs. 30}
Payment in each instalment = \frac{9750}{30} = \text{Rs. 325} \text{ Ans.}

Now mark up = Rs. 11950

\[
\% \text{age of cash price} = \frac{1950}{8000} \times 100 = 24.75\% \text{ Ans.}
\]

(c) Cash Price = Rs. 1200
Cash Payment = Rs. 200
Balance = Rs. (1200 - 200) = Rs. 1000
Mark up rate = 15%
Time = \frac{1}{3} \text{ years} = \frac{4}{3} \text{ years}

\[
\text{Amount of mark up} = \frac{1000 \times 15 \times \frac{4}{3}}{100} = \text{Rs. 200}
\]
Total amount to be paid in instalments
= Rs. (1000 + Rs. 200) = Rs. 1200
Number of instalments = \frac{11}{3} \times 12 = 16 \text{ instalments}
Each instalment = \frac{1200}{16} = \text{Rs. 75}
Now mark up = Rs. 200

\[
\% \text{age of cash price} = \frac{200}{1200} \times 100 = 16 \frac{2}{3}\% \text{ Ans.}
\]
The cash price of a computer package deal was Rs.3200. Markup paid @ 15% down payment and the outstanding balance plus markup over 24 months. Markup on the balance was charged at 9.5%.

(i) Find the cost of the package deal if it is bought on hire-purchase.
(ii) Find the difference between the hire-purchase price and the cash price.
(iii) Express the difference obtained in (ii) as a percentage of the cash price.

Solution:
Cash Price = Rs.3200

Down Payment = 15% of 3200

\[
\frac{15}{100} \times 3200 = Rs.480
\]

Balance = Rs.(3200 - 480) = Rs.2720

Time = 24 months = 2 years

Rate of mark up = 9.5%

Amount of mark up = \[\frac{9.5}{100} \times 2720 \times 2 = \frac{95}{100} \times 272 \times 2\]

\[= \frac{19}{20} \times 272 \times 2 = \frac{19}{10} \times 136 \times 2\]

\[= 258.40 \times 2 = Rs.516.80\]

Total amount to be paid = Rs.(2720 + 516.80) = Rs.3236.80

Number of instalments = 24

Amount of each instalment = \[\frac{3236.80}{24} = Rs.134.87\]

Difference of two prices = Mark up = Rs.516.80 Ans.

Cost of package if bought on hire purchase = Cash price + Mark up

\[= Rs.(3200 + 516.80) = Rs.3716.80\] Ans.

\[\%\ \text{age of Mark up} = \frac{516.80}{3200} \times 100 = 16.15\%\ \text{Ans.}\]
Review Exercise 4

Q.1- Encircle the correct answer.

(i) An instrument for payment order issued by a bank on the request of its customers is called:

(a) pay order  (b) cheque
(c) bank draft  (d) bill of exchange

(ii) The person or entity whose insurance is being done is called the:

(a) insurer  (b) insured
(c) drawer  (d) lessee

(iii) The company undertaking the act of insurance is called:

(a) insurer  (b) insured
(c) insurance  (d) insurance policy

(iv) The periodic instalment to be paid by the insured is called:

(a) bonus  (b) discount
(c) premium  (d) mark up

(v) The return earned by the bank on loan is named as:

(a) mark up  (b) premium
(c) bonus  (d) profit

(vi) The amount which is paid by the bank on the deposits is called:

(a) profit  (b) bonus
(c) premium  (d) mark up

(vii) The percentage of profit/markup charged is called:

(a) rate  (b) time
(c) interest  (d) principal

(viii) A machine installed by the bank to dispense cash to customer is called an:

(a) computer  (b) scanner
(c) ATM  (d) card reader
(ix) A bill of exchange drawn on a specified banker and not expressed to be payable otherwise then on demand is called:

(a) cheque 
(b) pay order 
(c) bill of exchange 
(d) bank draft

(i) \(a\) 
(ii) \(b\) 
(iii) \(a\) 
(iv) \(c\) 
(v) \(a\) 
(vi) \(a\) 
(vii) \(a\) 
(viii) \(c\) 
(ix) \(a\)

Q.2- Fill in the blanks.

(i) A bill of exchange drawn on a specified banker and not expressed to be payable otherwise then on demand is called a ____

(ii) An instrument like a cheque, issued by bank on the request of its customers is called____

(iii) A machine installed by the bank to dispense cash to customers is called an____

(iv) The amount which is paid by the bank on the deposits maintained by the client with the bank is called____

(v) The percentage of profit charged is called____

(vi) The period of the loan or deposit is called the____

(vii) The return earned by the bank on loan is named as____

(viii) The periodic installment to be paid by the insured is called____

(ix) The company undertaking the act of insurance is called the____

(x) The person or entity whose insurance is being done is called the____

Q.3- Raheel insured his house worth Rs. 75,00,000 @ 2% of 5 years. Calculate the amount paid in 5 years, while the rate of depreciation is 10% yearly.

Solution:-

Amount of Policy = Rs. 75,00,000

1st Premium @2% = \( \frac{2}{100} \times 75,00,000 = Rs. 1,50,000 \) ...(i)

After one year

Depreciation @10% = \( \frac{10}{100} \times 75,00,000 = 7,50,000 \)

New value = Rs. (75,00,000 - 7,50,000) = Rs. 67,50,000

2nd Premium @2% = \( \frac{2}{100} \times 67,50,000 = Rs. 1,35,000 \) ...(ii)

After 2 years

Depreciation @10% = \( \frac{10}{100} \times 67,50,000 = Rs. 6,75,000 \)

New Price of house = Rs. (67,50,000 - 6,75,000)

= Rs. 60,75,000

3rd Premium @2% = \( \frac{2}{100} \times 60,75,000 = Rs. 1215,00 \) ...(iii)

After 3 years

Depreciation @10% = \( \frac{10}{100} \times 60,75,000 = Rs. 6,07,500 \)

Depreciated Value = Rs. (60,75,000 - 6,07,500)

= Rs. 54,67,500

4th Premium @2% = \( \frac{2}{100} \times 54,67,500 = Rs. 109350 \) ...(iv)

5th Premium = 0

Total amount paid =

= Rs. (1,50,000 + 1,35,000 + 1,21,500 + 109350)

= Rs. 515850 Ans.
Q.4- Naeem insured his factory @ 3% for 3 years. With depreciation rate 5% yearly. If first premium is Rs.21,000, find the worth of the factory. If he got a claim of Rs.200,000 after two years, how much benefits did he get?

Solution:-

1st Premium @3% = Rs.21,000

3% of worth of factory = Rs.21,000

\[
\frac{3}{100}\text{ of worth of factory} = \text{Rs.21,000}
\]

Worth of factory = \(21,000 \times \frac{100}{3}\)

= Rs.7,00,000

After one year

Depreciation @5% = \(\frac{5}{100}\times7,00,000\)

= Rs.35,000

Depreciated Value = Rs.(7,00,000 – 35,000)

= Rs.6,65,000

2nd Premium @3% = \(\frac{3}{100}\times6,65,000\)

= Rs.19950

3rd Premium = 0

Total amount paid as Premiums =

= Rs.(21000 + 19950)

= Rs.40950

Amount of claim = Rs.2,00,000

Benefit to = 200,000 – 40950 = Rs.159,050 Ans.
Q.5- M/s Rahim printer purchases under hire-purchase system a machine from Lahore company on 1st January 2000, paying cash Rs.10,000 and agreeing to pay three further instalments of Rs.10,000 each on 31st December every year. The cash price of the machine is Rs. 37,250 and the Lahore company charges markup at 5% p.a. Draw table showing installments (Principal + Markup).

**MULTIPLE CHOICE QUESTIONS**

Tick the best choice.

(i) (PLS) Saving account was introduced in
(c) Jan.1982    (d) Jan.1983
(ii) A negotiable instrument means
(a) Promissory note  (b) Bill of exchange
(c) Cheque  (d) All of these

(iii) If 1 Riyal = Rs.22.400, Then Rs.44800 is equal to
(a) 200 Riyals  (b) 2000 Riyals
(c) 1900 Riyals  (d) 2100 Riyals

(iv) If one dollar = Rs.84.100, Then Rs.150 dollars is equal to
(a) Rs.12610  (b) Rs.12615
(c) Rs.12620  (d) Rs.12620

(v) In Islamic Banking, The words Profit or Markup have been replaced with
(a) Benefit  (b) Loss
(c) Interest  (d) Incriment

(vi) Simple interest, for the investment of Rs.1000 for 2 years @ 10% per annum, is
(a) Rs.100  (b) Rs.200
(c) Rs.300  (d) Rs.250

(vii) Compound Profit + Principal =

(a) Principal×\left[1+\frac{\text{Rate}}{100}\right]^\text{Time}

(b) Principal×\left[1+\frac{\text{Time}}{100}\right]^\text{Rate}

(c) Principal×\left[1-\frac{\text{Rate}}{100}\right]^\text{Time}

(d) Principal×\left[1-\frac{\text{Time}}{100}\right]^\text{Rate}

(viii) The time period agreed upon by both the Parities of insurance is called.
(a) Time  (b) Maturity
(c) Rate  (d) Premium
(ix) A car of price Rs.12,50,000 is insured at the rate of 4.50% P.A for five years. The premium for 5th year is
(a) 39237  (b) 38217  
(c) Zero     (d) 39927

(x) The Periodic instalment to be paid by the insured is called
(a) Markup    (b) Profit
(c) Insurance  (d) Premium

(xi) The bank account having high value of liquidity is termed as:
(a) PLS Account  (b) Saving Account
(c) Current Account (d) Foreign Currency Account

(xii) The return earned by the bank is named as
(a) Mark up   (b) Interest
(c) Profit    (d) Premium

MODEL CLASS TEST

Time: 40 mins  Max Marks: 25

Q.1- Tick the best choice.

(i) If 1 Riyal = Rs.22.300 , Then 1500 Riyal is equal to
(a) Rs.33250  (b) Rs.33350
(c) Rs.33450  (d) Rs.33550

(ii) If 1 Dollar = Rs.85.200 , Then Rs.12780 is equal to
(a) 1400 Dollars  (b) 1500 Dollars
(c) 1600 Dollars  (d) 1700 Dollars

(iii) The amount overpaid by the bank is called
(a) Mark up  (b) Profit
(c) Interest (d) Principal

(iv) The return earned by the banks on loan is named as
(a) Profit  (b) Mark up
(c) Interest  (d) Principal
(v) Amount can be drawn from any branch of a bank, in case of
(a) Current Account (b) PLS Account
(c) Pay order (d) On line banking
(vi) If a car is insured for three years @ 3% Then the third Premium is
(a) @ 1% (b) @ 2% (c) Zero (d) @ 3%
(vii) The time agreed by both the parties of an insurance policy is called.
(a) Time (b) Period (c) Maturity (d) Rate

Q.2- Attempt any five short question.
(i) Define "Negotiable Anstrument". What are its kinds?
(ii) If the simple profit on Rs.640 for 12 years is Rs.384. Find the rate of profit.
(iii) Find Compound Profit on Rs.4000 at 5% p.a for 3 years.
(iv) Ali bought an insurance policy against his car @ 3.25 for 3 years. He paid Rs.26000 as 1st premium. Find the price of the car.
(v) Define the terms "Insurance Policy", Premium, bonus.
(vi) Convert 5,00,000 PKR into Euro if
If 1 Euro = 112.4088 PKR
(vii) Find simple Mark up on loan of Rs.1,00,000 for 3 years @ 10% p.a.

Attempt any two questions of the following.

Q.3- Find the Compound Profit of Rs.5000 @ 6% p.a, For 2 years' compounded half yearly.

Q.4- Ahmad insured his house worth Rs.75,00,000 @ 2% for 4 years. Find the total amount paid in 4 years while depreciation is @ 10% yearly.

Q.5- Amjad Purchased a truck on hire Purchase for Rs.56,000 under the conditions.
Each instalment = Rs.1500
Rate of mark up = 5% p.a
Make a table of instalments.
